

CORPORATE SOCIAL RESPONSIBILITY (CSR)

About CSR Initiatives

Top Line Business Development Corp. (TOP) and its subsidiaries invest in sustainable, future-ready solutions that align operational efficiency with environmental responsibility.

Across its station network, Light Fuels Corporation (LFC) integrates solar panel systems in its stations to reduce dependence on conventional energy sources and lower its carbon footprint. LFC is also looking into electric vehicle (EV) charging infrastructure to support the transition to alternative energy transportation. This initiative positions the Corporation to serve both traditional fuel customers and the emerging EV market.

Additionally, water recycling systems are incorporated in its motor wash facilities, enabling the responsible reuse of water resources while maintaining high service standards.

TOP has also established an internal “Adopt-a-School” program as part of its broader community engagement and social responsibility initiatives. Under this program, each Light Fuels service station is encouraged to partner with a nearby public school within its host community.

The initiative is designed to provide meaningful and sustained support to local educational institutions through the provision of essential resources identified in coordination with stakeholders.
